

PocketWatch Quick Start Guide

The Main Menu of PocketWatch on 3 shows the various Tabs which display the data on a symbol in the required format.

Depending on your subscription you will see some symbols preloaded on your watchlist.

In the Watch, Chart, Quote and Depth Tabs, the 'Options' function on the left selection key gives you the option to edit symbols and customise the columns in the Watchlist, use features such as Quote, Depth, Charts or set Alerts on a symbol and change Zoom and Orientation settings as required.

To **add or remove symbols** in your Watchlist

- Select Options and select Modify
- Select Edit to change an existing symbol or
- Select Add to add a new symbol
- Edit or enter the symbol and select 'Done'
- Alternatively Select Delete/Cut under Options to remove the symbol from the Watchlist

To change the symbols in your Quote, Chart or Depth screen

- Select Options and select 'Add'
- Enter the new symbol and select 'Done'
- You can also clear the symbol using 'Clear' under Options.

You can view the Quote, Depth, News or set Alerts on a symbol from any type of Tab. However on the Charts Tab you can only view the Quote or Depth on a symbol.

To set an **Alert**

- Go to the Symbols you wish to set the alert on
- Select 'Options' and select Alert
- Select Options again and select 'New'
- Set the alert and select 'Done' and the 'Yes' to save

You can change the font size within any Tabs using the **Zoom** function under Options

Likewise you can change the **Orientation** to landscape and back to portrait for a better view of the data.

You can also set the application to leave the **Backlight** on the screen on 'Always On'. This can be done under Settings in the Main Menu.

Please note, since the backlight consumes a considerable amount battery power, keeping the backlight to always on will reduce the battery time and will need to be recharged more often than normal.
